* Ripple & Noise was measured with parallel cables (1 μ F ceramic capacitor + 10 μ F electrolytic capacitor). All data was measured at +25 °C, operating humidity <75 %, nominal input voltage. We recommend to use a cable as short as possible to connect module and load. As a power component this modul is for assembly purposes only and it must not be operated in unassembled condition. For more information and recommended additional circuits to improve the EMC performance, see Application Notes.
